BURSTEK
The World's Choice for Internet Security.

BURSTEK'S BT-LOGANALYZER
VOTED ISASERVER.ORG READERS' CHOICE AWARD WINNER

August 30, 2007 – Leading ISA Server resource site, ISAserver.org, announced today that Burstek's bt-LogAnalyzer was selected the winner in the Reporting category of the ISAserver.org Readers' Choice Awards.

"Our Readers' Choice Awards give visitors to our site the opportunity to vote for the products they view as the very best in their respective category," said Sean Buttigieg, ISAserver.org manager. "ISAserver.org users are specialists in their field who encounter various solutions for ISA Server at the workplace. The award serves as a mark of excellence, providing the ultimate recognition from peers within the industry."

ISAserver.org conducts bi-monthly polls to discover which product is preferred by ISA Server administrators in a particular category of third party solutions for Microsoft ISA Server. The awards draw a huge response per category and are based entirely on the visitors' votes. ISAserver.org users can submit their votes for the current Readers' Award poll in the site's left-hand bar.

About bt-LogAnalyzer

bt-LogAnalyzer is a software analysis tool for monitoring and managing employee Internet activity. Designed from the ground up for ISA Server (2000-2006), its browser-based interface enables department heads to run their own reports under secure conditions and with exceptional ease. (In addition to ISA servers, bt-LogAnalyzer can be installed on any Microsoft Operating system, and also supports any other combination of log formats.)

"bt-LogAnalyzer delivers custom reporting as high-level or detailed as our customers need it to be, whether they have hundreds or tens of thousands of users," said Michael Faisst, Burstek Product Development Manager. "It provides our customers with the tools they need to manage productivity and control legal liability, allowing them to focus on the business benefits of Internet access."

In addition to getting reporting by individuals, departments, or organizational units, in a concise, easy to read format, bt-LogAnalyzer customers enjoy the benefits of existing AD user and group structures, as well as time-saving exception reporting. "IT departments also love it because it frees up their IT resources with automated distributed reporting, which can be regularly delivered directly to the manager's inbox. They also like the free 24/7 technical support, " said Faisst. "Combined with bt-WebFilter, bt-LogAnalyzer provides a comprehensive solution to Internet access

filtering and activity reporting." To learn more and get a free trial of bt-LogAnalyzer, visit www.burstek.com/products/freeEval.aspx.

About ISAserver.org

ISAserver.org (http://www.isaserver.org) is a Microsoft ISA Server 2006/2004/2000 resource site. It is the leading ISA server site, attracting over 170,000 ISA administrators and specialists a month.
