Pre-Defined Report Definitions

Web and Email Activity Reports - Burstek LogAnalyzer SE™ contains two report types, Global and User Audit Detail. Each report type has several 'Sub Reports' depending on the level of detail required.

Global Reports display general information regarding all Users such as 'Top Web Sites' and 'Number of Users per Category' for a group of users. For example, if you wanted to see the Top 10 Categories that the Marketing department users accessed, you would run a 'Global - Number of Web Pages per Category' report.

User Audit Detail Reports are used to report on individual user activity such as 'Web Page Details' and 'Email Details'. Using the above example, if you select the 'User Audit Detail - Number of Web Pages per Category' report and entered a user or group of users, the report would list each user and their top 10 Categories.

Both report types can be customized to generate virtually any report and one type of report can feed another. Let's assume that you want to identify the Top 10 Web Sites for one of your departments; however, the department has a lot of turnover. To prevent the need to constantly update the report with the new users, you simply run a Global Report.

Acceptable Summary (LASE)

Displays a summary of data and URL details for the following categories (color-coded green): Business Services, Communications, Computer/Internet, Dining/Restaurants, Education, Financial, General News, Government, Health/Medicine, Industry/Business, Legal/Insurance, Marketing, Military, Non-Profit Organizations, Political, Real Estate, Religion, Search, Transportation/Shipping, Travel, Useful, Vehicles, Weather.

Bandwidth Summary (LASE) - Summarizes and displays data in order by most bandwidth used and lists top users of bandwidth by category.

Bandwidth Cost Summary (LA6) - Includes 'Top Users - Category Volume'

Business Day Summary (LASE)

A summary of all activity (web pages, viewing time, download time, bandwidth, and cost) for all categories and all users covering the 8AM to 12PM and 1PM to 5PM period only. The hourly selections can be modified and the default date range of the 'prior week' can also be modified.

Management Summary (LA6)- A 'one page' summary of all activity (web pages, viewing time, download time, bandwidth, and cost) for all categories.

Detail Risk Analysis (LASE) - Displays a column for each grouping of Category Groups (Popups, Legal Liability, Non-Productive, etc.)

Enterprise Summary Report (LA6 & LASE) - Produces several summaries including sections by Number of Web Pages Accessed, Bandwidth, Download Time, and by Category. Hourly access is also listed.

Executive Report (LASE)- A 'one page' summary of all activity (web pages, viewing time, download time, bandwidth, and cost) for all categories.

Global Risk - (LASE) - An enterprise style report that displays the number of Web Pages, Users, Download Time and Bandwidth per Category. Also contains a bar graph showing the bandwidth, Download Time, and Web Pages for the configured Category Groups.

Legal Liability Summary - (LASE)

Displays a summary of data and URL details for the following categories (color-coded red): Anonymizers, Chat, Criminal Skills, Cults & Occult, Extreme & Violence, File Sharing, Gambling, Hacking, Hate Speech, Malicious Code, Personals/Dating, Popups, Remote Access, Social Networking, Spyware/Adware, Weapons, XXX-Sexual Content.

Non-Productive Summary - (LASE)

Displays a summary of data and URL details for the following categories (color-coded yellow): Ad/Banners, Content Delivery Servers, Drugs/Alcohol/Tobacco, Email, Entertainment, File Types, Forums/Discussions, Free-Hosted Sites, Games, Graphics/Apps/Personalization, Humor, Job Search, Mature, News Groups, Online Storage, Shopping, Sports, Streaming Media Audio, Streaming Media Video, Temporary Parking.

Open Surfing Summary - (LASE)

A summary of all activity (web pages, viewing time, download time, bandwidth and cost) for all categories covering the 12PM to 1PM period only. The hourly selection can be modified and the default date range is the 'prior week' which can also be modified.

Quota Usage (LA6 & LASE) - Displays actual usage versus the quota established in Burstek's WebFilter Internet Filtering and Blocking software

Risk Assessment Summary (LASE) - Displays a column for each grouping of Category Groups (Popups, Legal Liability, Non-Productive, etc.)

Sexual Content Details (LA6 & LASE)

Displays User and URL details for the XXX-Sexual category.

Social Networking (LASE) - Displays all User activity for Facebook, MySpace, Chat and personals type of Web sites.

Top Web Sites (LA6 & LASE) - Displays total number of Web Pages.

User Audit Detail (LA6 & LASE)

Displays URL details for all categories for the selected User, Users or Group. NOTE: If this report is run for 'all users' over an extended period of time (1 month), depending on the size of the log files, it could generate an extremely large HTML file as it will contain 'hot links' to all URLs for all users for the selection period.

Web Extra (LA6 & LASE) - Lists uncategorized websites and the number of web hits per website. This report can be sent to sites@burstek.com for categorization as no other information is displayed.

Exchange Email Details (LA6 & LASE) - Displays Date/Time, Sender, Recipient and Bandwidth for each email sent or received.

Top 25 Web & Exchange Users (LASE) - Combines Web and Email activity into a single report

Top Users - Inbound Email (LA6 & LASE) - Lists top users receiving email.

Top Users - Outbound Email (LA6 & LASE) - Lists top users sending email.

Total Email Activity (LA6 & LASE) - Displays a summary of number of emails sent and received.

Total Email Volume (LA6 & LASE) Displays a summary of KB of email activity

Your Custom Report (LA6 & LASE) - A template for creating and customizing your own reports.

PROGRESS METER:

LA6 Only - The percent complete for all reports still processing is continuously updated and may be viewed by selecting Reports in the right-navigation pane and view the percent in the right-pane

JOB QUEUE

LASE Only - You can view the status of a report generation by selecting the 'Job Queue' option of the 'Active Links' navigation section of the interface.

JOB QUEUE

This page refreshes every 15 seconds.

User Audit Detail - Risk Analysis

The 'Risk Analysis' report displays, Bandwidth, Web Pages, and Download Time for any 'Category Groups' configured. You can use the default groups supplied or create your own. The default 'Category Groups' are:

Corporate Intranet - Includes 'Intranet' and 'Local' categories to indicate internal URL access

Job Search - Contains the 'Job Search' category

Legal Liability - Consists of all current 'Red' categories such as 'Gambling' and 'Hacking'

Non-Business - Yellow categories that typically are not business related such as 'Entertainment' and 'Games'

Security Risk - Orange Category group that signifies high risk to an environment. Example categories include: 'Malicious Code' and 'Anonymizers'

Social Networking - Categories that include Chat sites and Social Media URLs

Streaming Media - Contains both the 'Streaming Audio' and 'Streaming Media' categories

User Audit Detail - Top Web Sites

Displays the Top URLs by page count for the time period selected. Other columns include percent of Web Pages, Bandwidth, Download Time and Cost. (Cost column is based on the value in the 'Cost Factor' configuration option).

Global - Risk Analysis

The 'Risk Analysis' report displays, Bandwidth, Web Pages, and Download Time for any 'Category Groups' configured. You can use the default groups supplied or create your own. The default 'Category Groups' are:

Corporate Internet - Includes 'Intranet' and 'Local' categories to indicate internal URL access

Job Search - Contains the 'Job Search' category

Legal Liability - Consists of all current 'Red' categories such as 'Gambling' and 'Hacking'

Non-Business - Yellow categories that typically are not business related such as 'Entertainment' and 'Games'

Security Risk - Orange Category group that signifies high risk to an environment. Example categories include: 'Malicious Code' and 'Anonymizers'

Social Networking - Categories that include Chat sites and Social Media URLs

Streaming Media - Contains both the 'Streaming Audio' and 'Streaming Media' categories

Global - Number of Users per Category

This report will show the number of Users who accessed URLs matching the selected Categories over the report period. Additional columns shown are Percent of Total Web Pages, Number of Web Pages, Bandwidth, Download Time, and Cost. (Cost requires configuration of Bandwidth Cost Factor option in bt-LogAnalyzer SE™.)

- Education
- Financial
- General News
- Government
- Health/Medicine
- Industry/Business
- Legal/Insurance

- Marketing
- Military
- Non-Profit Organizations
- Political
- Real Estate
- Religion
- Search
- Transportation/Shipping
- Travel
- Useful
- Vehicles
- Weather

Advanced Report Options:

None Selected

Report Definition:

Detail report for individual user(s) that will list the total number of Web Pages matching each of the selected categories, the Top 25 Web Sites (also sorted by Bandwidth) and the amount of time taken to download page content. The report also breaks down the users' access on an hourly basis and provides the first 25 complete URLs called by the user(s). The cost of bandwidth used per Category can be calculated in this report by simply adding a 'value per KB' in the 'Cost Factor' setting in both LASE and LA6.

Report Name: Bandwidth Summary

Type: Global

Product: bt-LogAnalyzer SE™

Sub Reports:

Cost By Category
Top Users - Volume
Top Web Sites by Bandwidth
Web Access - Hourly Bandwidth
Top Users - Volume Quota

Categories Selected:

All

Advanced Report Options:

Apply thresholds to the report: 10 (All Categories)

Report Definition:

Global report type that displays information regarding your enterprise as a whole: the cost of bandwidth for individual categories; web sites; users consuming the most bandwidth; and the hours when that bandwidth is being used.

If used with the bt-WebFilter product and quotas are configured, report will also show the users and the amount of quota used.

Report Name: Bandwidth Cost Summary

Type: Global

Product: bt-LogAnalyzer 6

Line Limit: N/A

Sub Reports:

Cost by Category
Top Users - Category Volume
Top Users - Volume
Top Web Sites by Bandwidth
Web Access - Hourly Bandwidth
Top Users - Volume Quota

Categories Selected:

All

Advanced Report Options:

None Selected

Report Definition:

Global report type that displays information regarding your enterprise as a whole: the cost of bandwidth for individual categories; bandwidth used per category; web sites; users consuming the most bandwidth; and the hours when that bandwidth is being used.

If used with the bt-WebFilter product and quotas are configured, report will also show the users and the amount of quota used.

Report Name: Business Day Summary

Limit 'Number of Web Pages per Category' report to display:
10 Items

Report Definition:

Global report type that displays the top 10 categories and the number of web pages accessed for your enterprise as a whole for the time period selected. Additional information contained in the report includes the number of users for each Category, the download time, bandwidth used, and the cost if the Bandwidth Cost Factor option for each category is configured.

Report Name: Detail Risk Analysis

Type: User Audit Detail

Product: bt-LogAnalyzerSE™

Sub Reports:

- Number of Web Pages per Category
- Risk Analysis
- Web Page Details

Categories Selected:

All

Advanced Options:

- Resolve User Names
- Risk Analysis Report
 - Bandwidth
 - Web Pages
 - Download Time

Report Definition

Detail report that will show all Categories for the specified user(s) including the number of Web Pages per category, the download time, bandwidth utilization and cost. Report will also display a graph showing the Category groups accessed.

Due to the 'Web Page Details' sub report type included in this report, it is not recommended you select an extended date/time period. De-selecting the Web Page Details sub report will still provide the Risk Analysis function.

Report Definition

Global report that will display users in order of outbound email usage. Report lists users' total email size (volume) and the number of emails (activity).

To be able to generate this type of report requires Microsoft Exchange Logs to be loaded.

NOTE: bt-LogAnalyzer 6 does not support Microsoft Exchange 2007 or 2010 logging.

Report Name: Total Email Activity

Type: Global

Product: bt-LogAnalyzer SE™
bt-LogAnalyzer 6

Sub Reports

Top Users - Email Activity

Categories Selected:

N/A

Advanced Options:

None

Report Definition

Global report that will display the 'Total Activity' (number of emails) of each email user.

To be able to generate this type of report requires Microsoft Exchange Logs to be loaded.

NOTE: bt-LogAnalyzer 6 does not support Microsoft Exchange 2007 or 2010 logging.

Appendix A - Status Codes and additional reporting terms

Reporting Definitions

Denied - HTTP requests that were denied by either proxy or Web filtering software.

Failed - HTTP requests which failed while they were being processed by either proxy or Web filtering software.

Unknown - HTTP requests whose status cannot be determined.

Successful - HTTP requests submitted and accessed successfully.

Undefined - Represents uncategorized Web pages.

Web pages - URLs initiated by the user via direct clicking; it includes both accessed and attempted URLs. Included also are instances initiated as a result of another URL being directly clicked on.

Note: You can submit a URL for categorization by sending the complete URL to sites@burstek.com. Also, if you choose to generate a Web Extra report and email the results to sites@burstek.com, you can ensure prompt attention by our dedicated staff. Only URLs are sent; no proprietary information is included.

Multimedia - pseudo-category containing multimedia related content (video, audio, images, etc.).

Downloads - includes objects not viewed in the browser (programs, movies, etc.).

Bandwidth – includes pseudo-category containing style sheets and JavaScript files.

Viewing Time: is calculated by applying the Viewing Time Factor to the number of Web Pages.

Download Time: Download time is the same across all Web Proxies / Firewalls. When displayed in a LogAnalyzer report, it represents a cumulative measure of time for each matched URL of a Web Site accessed.

For example, if a Web Site contains 10 URLs and each URL takes 5 seconds to load, LogAnalyzer will report 50 seconds of total download time. This time is taken directly from the log file. We recognize that the page itself may load in 10 seconds due to the ability of the computer to process multiple streams simultaneously; however, download time is not related to the number of hours in a day.

Prefixes in SubReports:

The following prefixes may be seen in the Web Page Details sub-reports:

- 'D' stands for 'Denied' and refers to those HTTP requests which were denied by either the proxy or the Web Server.
- 'F' stands for 'Failed' and refers to those HTTP requests which failed while they were being processed by either the proxy or Web Server.
- 'U' stands for 'Unknown' and refers to those HTTP requests in which the status cannot be determined.

NOTE: No prefix means HTTP request was processed successfully by both proxy and Web server.

Appendix B - Advanced Report Options

Advanced Report Options

Resolve User Names:

This option allows you to specify the actual user name be displayed rather than their domain/logon name.

Include IPs to Web Page Details report

This option allows you to specify IP addresses of the computers used to access the Web Page as well as the user domain/logon name.

Show email subjects

This option allows you to show the Email subject line in Email Details reports.

Suppress distribution list

This option allows you to suppress Email Distribution lists.

Hide Report Synopsis and Report Parameters sections

This option allows you to hide the Report Synopsis and Report Parameters sections of the a report so that you can immediately view the data.

Run this report at remote servers

This option tells the report to also run on your remote bt-LogAnalyzer SE™ server(s). After setting this option, you should replicate the report definition, i.e. push the report definition to the remote servers. This can be done from the REPORT LIST page. For instructions on how to setup the Virtual Report Server (the server that will process the summary submitted by remote servers into one report), please see the APPLICATION SETTINGS - DISTRIBUTED REPORTS page.

Limit 'Number of Web Pages per Category' report to display "x" items

This option allows you to limit the number of specific Web Page details shown for each category you specify.

Treat custom URL masks as 'Undefined' (LASE Only)

When you create a new URL mask and add it to a Category, any URL that matches will be assigned to that Category. As a result, the URL may lose its 'Undefined' mark and will not be included on Web Extra reports. Selecting this option will ensure that any Custom URL maintains this 'Undefined' status if it is not currently in the bt-LogAnalyzer SE™ Control List.

Risk Analysis Report:

Bandwidth - Displays a bar on the 'Risk Analysis' chart showing the number of kilobytes per Risk Category.

Web Pages - Displays a bar on the 'Risk Analysis' chart showing the number of Web Pages visited per Risk Category

Download time - Displays a bar on the risk Analysis chart showing the approximate amount of time spent downloading pages within each Risk Category.

Apply thresholds to the report

This option allows you to specify whether or not to apply a threshold to the report. You can setup a default report threshold and then specify separate thresholds for some or all categories. For example, to recognize that an accident may have happened, you may want to specify that a user needs to visit 4 sites that are categorized as "Gambling" before it shows up on a report because anything less than that could be accidental views. To define individual thresholds for some or each Category, press 'Categories.'
