

Burstek LogAnalyzer

Advanced Web analysis and reporting for the enterprise that safeguards your network and employees.

LogAnalyzer is Burstek's Web analysis and reporting solution that reports on your organization identifying risks associated with your security, employees, legal liability, productivity, and network resources. Using exception-based reporting, LogAnalyzer pinpoints problem areas before they can affect the organization. It provides the level of security insight and analysis necessary to make informed decisions about deployment, use and protection of a company's Internet resources and how to optimize these vital resources for maximum business benefit.

Challenges Corporations are Facing:

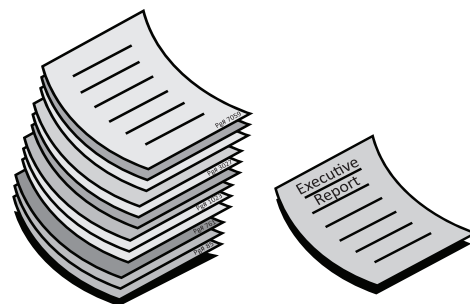

- Employees bypassing filter products to access anonymous proxy and tunneling sites
- Unable to report access by users
- Serious concerns for company security and compliance issues
- Limited budget

Key Features

- Browser-based reporting for ease of use
- Driven by a comprehensive URL database
- Active Directory Integration
- Daily Category List updates
- Unlimited custom categories
- Distinguishes between real activity and accidental hits
- Distributed Reporting - Saving time and bandwidth
- Web Usage Reports for enterprise, department, users, OUs, etc.
- Scalable, flexible, and customizable

LogAnalyzer is built around exception-based reporting. Management can quickly identify problem areas needing immediate attention without poring through stacks of reports.

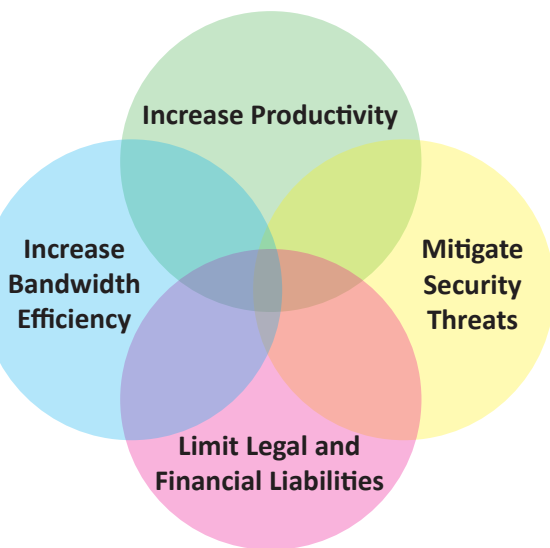

Figure 1: Exception-Based Reporting

LogAnalyzer turns data into information providing you with timely and detailed information resulting in increases in productivity, performance, and profitability.

LogAnalyzer's Key Benefits

- Daily Updates of the Category List ensures accurate and actionable reporting
- LogAnalyzer's color-coded reports visually alerts the viewer to potential problems

- Reports cover the whole organization - enterprise, user, department, OUs, etc.
- Ability to filter on previously generated reports makes LogAnalyzer very customizable and fast
- Ability to combine multiple log file formats from multiple locations into a single report will ensure we support your existing environment and better fit your organization's needs
- Distributed Reporting - enables preprocessing at remote locations to take advantage of slow time and save bandwidth
